

8 members of the International Space Corp. are stationed on the International Space Station. A woman with an unknown illness has been brought to the space station from one of the new moon settlements. She is ranting incoherently... no-one is sure what she is talking about. Dr Stein has been working on a cure and was getting close but now he has disappeared and any chance of the cure being discovered have seemingly disappeared with him! There is a police officer being sent from earth to investigate but he won't be on the space station for at least 2 weeks. The job of the rookie detectives is to try to collect as much information from the crew of the space station as possible so that they can brief the police officer when he arrives. If they can figure out what has happened to Dr Stein or even better find the cure – they will be generously rewarded. If there has been foul play, there may even be someone for the police officer to arrest!

If you are reading this, my worst fears have been realized. I have suspected for a long time that someone has been trying to steal my cure for the zombie virus. It is only in the last few days that I believe I have developed the cure and within the week I hope to test it on our poor victim. All of humanity will benefit from my work but I must make sure it does not fall into the wrong hands. For this reason I have had to hide my work.

If you are reading this, my worst fears have been realized. I have suspected for a long time that someone has been trying to steal my cure for the zombie virus. It is only in the last few days that I believe I have developed the cure and within the week I hope to test it on our poor victim. All of humanity will benefit from my work but I must make sure it does not fall into the wrong hands. For this reason I have had to hide my work.

The most important thing is that you find my cure – finding me is not as important. Everything you will need to make the cure is in this room, if you have the investigative skills to find the information and the scientific skills to recreate the experiments you will be giving a gift to all people.

Good luck – you will need it.

*Dr Frank N Stein*
